Re Item V

Reasoned statement with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Reference is made to the following documents:

D1: DELATTRE J.L. ET AL.: 'Plasma-Fluorination Synthesis of High Surface Area Aluminum Trifluoride from a Zeolite Precursor' JOURNAL OF THE AMERICAN CHEMICAL SOCIETY, vol. 123, 2001, pages 5364-5365, XP002254993

D2: FR-A-1 383 927 (DU PONT) 4 January 1965 (1965-01-04)

D3: GB 995 186 A (MONTECANTI SOCIETA GENERALE PE) 16 June 1965 (1965-06-16)

D4: US-A-2 959 557 (HANSFORD ROWLAND C) 8 November 1960 (1960-11-08)

2. The present application does not meet the criteria of Article 33(1) PCT, because the subject-matter of claims 11-18 is not new in the sense of Article 33(2) PCT.

Claims 11 and 12 are drafted in terms of a "product-by-process" claim. In view of the provisions of Article 64(2) EPC the EPO considers "product-by-process" claims to extend to the product per se. The product thus falls within the general definition of an amorphous metal fluoride. Taking into account the fact that a product is not necessarily new if it is made by a novel process and the interpretation of "product-by-process" claims used by the EPO, the subject-matter of claims 11 and 12 is considered to lack novelty in respect to documents D1-D3, when considered separately.

Document D1 (cf. p.5365 col.1 second paragraph) disclose amorphous AlF_3 catalysts having high surface area ($190 \text{ m}^2/\text{g}$).

Document D2 (cf. p.9 example 6) describes amorphous aluminum fluoride catalyst for fluorination reactions.

Document D3 (see the examples) describes the preparation of amorphous transition metal fluorides showing catalytic activity and having higher air and moisture stability than the respective starting halides (cf. p.2 l.46-59).

Hence, the subject-matter of claims 13-18 is not novel over the teaching of documents D1 to D3, when considered separately.

**WRITTEN OPINION OF THE
INTERNATIONAL SEARCHING
AUTHORITY (SEPARATE SHEET)**

International application No.

PCT/EP04/00049

Re Item VII

Certain defects in the international application

1. The term "acidic acid" used in claim 3 and in the description on pages 3 and 13 is unclear.
2. The formula for β -aluminum fluoride in Table 1 should be corrected to AlF_3 .

Re Item VIII

Certain observations on the international application

1. Although method claims 1 and 10 and product claims 11-13 and 18 have been drafted as separate independent claims, they appear to relate effectively to the same subject-matter and to differ from each other only with regard to the definition of the subject-matter for which protection is sought. The aforementioned claims therefore lack conciseness. Moreover, lack of clarity of the claims as a whole arises, since the plurality of independent claims makes it difficult, if not impossible, to determine the matter for which protection is sought, and places an undue burden on others seeking to establish the extent of the protection.

Hence, claims 1, 10-13 and 18 do not meet the requirements of Article 6 PCT.
